NORTH COAST BIOCHAR: *Consider the source!*

The Redwood Forest Foundation, Inc. (RFFI), a non-profit organization, purchased 50,000 acres of severely depleted forestland in Mendocino County with the goal of creating a working community forest that provides both critical habitat for increased biodiversity and improved regional economic vitality. As part of this extensive forest restoration, RFFI produces North Coast Biochar from the tanoak and brush that are choking out competing conifers. RFFI aims to generate sufficient revenue from the sale of this biochar to pay for the cost of ecologically removing the excess woody biomass. By purchasing North Coast Biochar you support our restoration projects, improve forest health, and reduce the danger of forest fires. Please visit www.rffi.org for more information on our activities.

North Coast Biochar will be producing a limited amount of high-quality, high-carbon, highly adsorptive biochar starting in May 2017. This supply will be snapped up quickly so if you would like to get your hands on some let us know ASAP. To purchase biochar by the supersack or by the truckload, contact Raymond Baltar at (707) 291-3240 or by email: raymond.baltar@gmail.com.
